SATYAM KUMAR

Data Engineer | +91 9693342101 | satyamkr1354@gmail.com | linkedin.com/in/satyam1354/ | github.com/satyamchy

PROFESSIONAL SUMMARY

Data Engineer with 1+ year of experience building production-grade ETL pipelines and BI reporting solutions for US healthcare clients. Migrated legacy SAS reporting to SQL-driven Power BI dashboards, engineered automated data reconciliation systems processing 1,800+ files across 60+ report schemas, and delivered end-to-end workflows integrating Oracle DB, Teradata, SharePoint, Power Automate, and Power BI.

TECHNICAL SKILLS

Languages & Query: Python, SQL, M-Code (Power Query)
Data Engineering: ETL/ELT Pipelines, Snowflake, Databricks, IICS, dbt, AWS S3
BI & Reporting: Power BI, Power Query, Power Automate, DAX
Databases: Oracle DB, Teradata, SharePoint

WORK EXPERIENCE

Data Engineer — Risk Adjustment IT | Innova Solutions | Hyderabad *Jan 2026 – Present*

- Engineered a dual-source ingestion pipeline in Power Query (**M-Code**) connecting Teradata tables and automated daily TXT file drops — selecting today's file dynamically, transforming raw data into structured tables, and computing record-level counts for downstream reconciliation.
- Built a daily-refreshed Power BI reconciliation dashboard surfacing a rolling **10-day mismatch log** between Teradata enrollment records and TXT file counts for real-time disenrollment monitoring.
- Automated a **data quality alerting pipeline** via Power Automate — triggering targeted stakeholder email notifications on detection of record-count mismatches post daily refresh.

Data Engineer — Centene US Healthcare (Medicaid & Medicare) | Innova Solutions | Hyderabad *2025 – 2026*

- Engineered an M-Code pipeline in Power Query to ingest, standardize, and merge **1,800+ monthly CSV files** across 60+ heterogeneous report schemas — normalizing columns and consolidating SharePoint data into a unified Power BI dataset.
- Architected an end-to-end data workflow integrating Oracle DB (SQL) → Power Automate → SharePoint → Power BI, **migrating legacy SAS scripts** to optimized SQL — enabling daily-refreshed dashboards tracking Medicaid & Medicare claim errors at enterprise scale.
- Constructed an Error Analytics Dataset with engineered columns — **Key ID, Entry Date, Completed Date, Claim Age, and SLA metrics** — to visualize claim processing error trends and SLA compliance across monthly reporting cycles.

TRAINING & SELF PROJECTS

- **Snowflake (2025):** Hands-on training covering warehouse tuning, clustering, time travel, zero-copy cloning, streams, tasks, stored procedures, and SQL optimization for large-scale data warehouse environments.
- **IICS & dbt (2025):** Built practice ETL pipelines with parameterized IICS mappings for multi-source ingestion; explored dbt for transformation layering including staging models and data mart design on Snowflake.

EDUCATION

B.E. in Computer Science — Chitkara University, Baddi, HP *2022 – 2026* | *CGPA:* **9.50 / 10.0**

CERTIFICATIONS

IBM AI Fundamentals | **AI for Scientific Research** | **Software Product Management** — Coursera (IBM)
